Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	AI Newbee
Project / Solution Name	Minder
Name (Leader)	Lee Yi Cheng
Email & Phone (Leader)	yicheng070612@gmail.com / +601118903388
University Affiliation(s)	Universiti Teknologi Malaysia (UTM), Asia Pacific University
Live Prototype URL	https://aiversecity-career-compass.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/jahax2154/sdc-2026-minder

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Minder supports career exploration and personalised reskilling through Profile, Minder chat, Mindbot and Explore views. Replit was used for the initial frontend; Codex supports implementation in the shared GitHub project. The browser connects to a Python application backend for profile/plan state, career scoring and bounded agent actions. The locally integrated LLM path uses Groq-hosted Qwen3.8-27B. Personal-fit scoring and dated market evidence remain separate from narrative generation. Offline experiments compare last-value and seasonal baselines with Ridge and XGBoost on synthetic market series; this does not validate real Malaysian forecasts. Local application/agent integration has been reported tested. Durable storage, final database/hosting and complete deployed acceptance require confirmation against the submitted build. RunPod execution had not occurred at the latest reported checkpoint.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python 3 Exact version: CONFIRM	Backend, scoring and experiment tooling.	PSF License v2
React; TypeScript Exact versions: CONFIRM	Reported component-based frontend and typed UI code.	React: MIT; TypeScript: Apache-2.0
Vite; HTML/CSS/JavaScript Vite version: CONFIRM	Frontend tooling and standalone interactive HTML design previews.	Vite: MIT; web languages: N/A
FastAPI; Pydantic Use/versions: CONFIRM	Declared backend/API and validation stack; reconcile with installed packages.	MIT (both)
scikit-learn; XGBoost Exact versions: CONFIRM	Ridge and boosted-tree experiment implementations.	BSD-3-Clause; Apache-2.0
Other direct dependencies CONFIRM from lockfiles	Reconcile database, SDK, numerical, test, UI and asset dependencies.	CONFIRM each installed licence

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
GroqCloud API - Groq	Hosted Qwen3.8-27B inference for the reported local chat/agent integration.	free
Source/web and action APIs CONFIRM provider inventory	Source browsing and agent checks were reported; exact external endpoints are unconfirmed.	CONFIRM for each actual provider.
Other runtime APIs CONFIRM final inventory	Reconcile the submitted app; no additional named provider is established.	CONFIRM / None, as applicable.
Clerk authentication services	Login/session handling and backend identity verification	
Mwmbl Search API	General public-web discovery for market, role and skill questions	
Public-source HTTP retrieval/data downloads	DOSM/OpenDOSM, TalentCorp, Randstad, O*NET, MDN and other sources actually recorded in traces	
Bosch recruitment feed/platform endpoints	Employer-specific advertisements and qualifications	
Replit App Storage service	Private CV upload/read/delete	
RunPod management build and job APIs	Build, configure, submit, monitor and clean up GPU experiment	
GitHub API/integration	Checkpoint publication, repository handoff and native RunPod GitHub build	

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit - Replit	Frontend mockup, agent-assisted UI development and preview.	CONFIRM plan, region and final publishing mode.

Service & Provider	Purpose in Project	Plan / Region
GitHub - GitHub	Shared source repository, branches and engineering handoff.	CONFIRM account/repository access; region N/A.
GroqCloud - Groq	Hosted inference for the local application/agent integration.	CONFIRM account tier and applicable region.
RunPod - planned; not yet used	Latest reported status: zero jobs and USD0 spent. No executed GPU run is claimed.	Not applicable until actual execution.
Final hosting / DB / object storage	Durable chat/CV persistence and hosted deployment require final confirmation.	CONFIRM actual providers, plans and regions.

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen3.8-27B qwen/qwen3.8-27b	Alibaba Cloud / Qwen; hosted by Groq	Pre-trained hosted inference; local integration reported. No team fine-tuning reported.	Apache-2.0; Groq Services Agreement
Personal-fit baseline Commit: CONFIRM	Team-authored scoring implementation	Deterministic scoring; no pre-trained weights. Final selected scorer: CONFIRM.	Team code; repository licence: CONFIRM
Last-value and seasonal baselines Commit: CONFIRM	Team synthetic-market experiment	Evaluated on fictional series; Seasonal remained validation-selected.	Team code; repository licence: CONFIRM
Ridge regression Artifact/version: CONFIRM	Team experiment; scikit-learn	Self-trained experiment on synthetic series; real-market accuracy not established.	scikit-learn: BSD-3-Clause
XGBoost regressor Artifact/version: CONFIRM	Team experiment; XGBoost	Self-trained experiment on synthetic series; real-market accuracy not established.	XGBoost: Apache-2.0

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Synthetic market time series	Team experiment; B generator/data manifest.	Synthetic; local training/evaluation.	Team-created; release licence: CONFIRM	N
Fictional profiles and UI/test fixtures	Team-created demo/test assets; CONFIRM final manifest.	Synthetic; demonstrations and tests.	Team-created; release licence: CONFIRM	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Public role/skill and market evidence Inventory: CONFIRM	CONFIRM actual source URLs, dates and imported versions.	Public; exact admitted sources require confirmation.	CONFIRM per source	N
CV/resume demo fixtures	Use fictional demo documents; CONFIRM final fixture paths.	Synthetic	Team-created release license: CONFIRM	N
ESCO references and O*NET–ESCO crosswalk	https://esco.ec.europa.eu/	Public		N
DOSM published offering/activity observations	Exact DOSM source assets in B manifest.			N
DOSM monthly labour-force statistics	https://open.dosm.gov.my/data-catalogue/lfs_month			N
TalentCorp MyNSR public pages	Exact A/C retrieval URLs			N
Bosch Malaysia recruitment observations	Official recruitment feed/platform URLs from B manifest.			N
Historical JobStreet/Galaxy corpus	Exact dataset URL/version in HISTORICAL_SOURCE_AUDIT.v1.md.			N
Randstad market/hiring pages	Exact retrieved URLs from A answer evidence.			N
MDN Web Docs	https://developer.mozilla.org/			N
Other retrieved pages and registered learning resources	Exact URLs/titles from A/E manifests.			N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
ChatGPT - OpenAI Model/version not pinned	Requirements, architecture, design/code assistance, review and submission documentation.	Major
Codex - OpenAI Client/model version: CONFIRM	Backend/ML implementation, integration, debugging and engineering checks.	Major
Replit Agent - Replit Hosted version not pinned	Initial frontend mockup and agent-assisted UI iteration.	Major
ChatGPT image generation Project use/model: underlying model not pinned in available records	UI mockups, visual references, avatar/design assets and architecture/presentation images	Major
Other AI development tools Team inventory: CONFIRM	Confirm any additional assistants used by teammates.	CONFIRM / None

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

We use ChatGPT, Codex and Replit Agent for planning, design, code and documentation. We review scope, changes and UI behaviour, and run automated and browser checks. Reported local verification includes 204 ML tests, 47 backend tests and 13 application/tool/scheduled checks, plus privacy/source checks. Synthetic experiments preserve validation/test separation and are labelled as simulation. We retain responsibility for generated output, licensing, factual claims and the submitted build; local test results do not certify public deployment.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No [CONFIRM sponsor entitlement before selecting]

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project
Replit Entitlement: CONFIRM	Platform used; sponsor-issued credit or access redemption is unconfirmed.	Initial frontend mockup and UI development. No sponsor-credit consumption is certified.
RunPod No execution reported	Planned compute platform; zero jobs and USD0 spent at last report.	Prepared work is not execution proof. Update only after a genuine run.
SDC technical mentorship Provider: CONFIRM	Technical feedback session; sponsor affiliation unconfirmed.	Guidance on user pain points, problem focus and product differentiation.
Other sponsor resources CONFIRM inventory	No additional sponsor-issued API, credits or data established.	Confirm actual use with the registered team leader.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was used for frontend work; its code can be maintained and hosted elsewhere. Platform use does not establish that sponsor credits were redeemed. RunPod is intended for a bounded compute run, but the latest report records zero jobs and USD0 spent. Core scoring and local development can run without it. Technical mentorship informed problem focus and differentiation. Sponsor-issued entitlements, provider identities and any later consumption must be confirmed.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Profile inputs can include skills, interests, goals, experience and time constraints; chat and CV/resume contents may also contain personal data. The competition demo is scoped to fictional profiles and synthetic CVs. Selected conversation/profile context is sent to Groq for inference; exact payload fields and account retention settings require final verification. Local credential-binding and privacy/source checks were reported passed. Durable chat/CV storage and hosted access controls remain release tasks, so production storage protection is not certified. Retention/deletion periods, database/object-storage providers and account settings must be confirmed. Secrets and raw CVs must remain outside the public repository and client bundle.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

LLM output may contain unsupported statements or unsafe action proposals; career scores are decision-support indices, not employment probabilities. Source coverage and freshness are incomplete. Synthetic experiments do not establish real Malaysian demand accuracy: the last-value baseline outperformed Seasonal, Ridge and XGBoost on the reported final test; Seasonal remained validation-selected. Reported safeguards include input/schema validation, score bounds, holdout separation, credential binding, privacy/source checks and bounded action handling. Groq availability/rate limits and unresolved durable storage/hosting remain dependencies. Final real-data validation, deployment access and the complete saved-state user journey still require verification.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

Pending team leader verification: complete the CONFIRM fields and review each statement before ticking.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team’s knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

[Signature] Pending registered team leader signature.

[Date] Pending actual signing date.
